DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-10, 13-15, and 18-23 are maintained as rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention, for the reasons of record set forth in the prior Office action, mailed 05-06-2003.

Claims 1-10, 12-15 and 18-23 are maintained as rejected under 35 USC 112, first paragraph, as not fully enabled by the specification, for the reasons of record set forth in the prior Office action mailed 05-06-2003.

Response to Arguments

Applicant's arguments filed 09-05-2003 have been fully considered but they are not persuasive. In response to the rejections of record of claims 1-10, 13-15 and 18-23, Applicant argues that the amendment filed 09-05-2003 limits

Art Unit: 1635

the claims to a full length sequence of human coagulation factor VII and that the application demonstrated possession of the full length sequence at the time of filing and further, that the specification as filed was enabled for the full length sequence. This argument has not been found to be persuasive because the claims would still encompass modified versions of the full length sequence not described in the specification as filed, for example, the claims would still encompass mutant sequences, allelic variants, and other undescribed modified, variant sequences, a representative number of modified sequences were not described in the specification filed or in the prior art at the time of filing. Further, claims 13 do not recite the full length sequence and, although claim 23 recites the limitation "full length sequence" the claim recites modifying the full length sequence, including wherein the full length sequence can be a full length sequence which has been modified by deletion and, therefore, would continue to read on fragments.

Applicant argues that the amendment to the specification, which adds a paragraph to the specification directed to the embodiments wherein a porcine A2 epitope sequence is substituted in the human sequence and the B-domain is deleted, provides enablement for the claims because this disclosure along with the prior art would enable the claimed invention. This amendment is supported by the limitations presented in the originally filed claims, specifically claims 15-17. This argument is not found to be persuasive. A statement that these embodiments are contemplated by the specification does not provide the skilled

artisan with any additional guidance to enable the claimed invention and does not change the disclosure as filed.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
